

Borg & Beck Braking

Borg & Beck Braking offers 'BECKTEC' coated discs and double rubber 'BECKTEC' shimmed pads as standard.

Using the latest innovation and technology, Borg & Beck discs are being upgraded to offer a cutting edge 'BECKTEC' coating. Alongside this, the Borg & Beck range of Brake Pads is also being enhanced to contain a new double rubber 'BECKTEC' shim, which provides additional benefits over a standard shim.

Both of these exciting new features, which are being phased in as stock gets replenished, are fast becoming standard issue across the extensive range of Borg & Beck Braking.

Borg & Beck BECKTEC Coated Brake Discs*

- > Offering a comprehensive range of over 1,400 products
- > High carbon - No compromise on material make-up or weight reduction
- > BECKTEC Coated - A water based coating using Zinc-Aluminium flakes which protects the disc inside and out against rust and corrosion which provides improved thermal properties resulting in better performance
- > No need to clean before installation, just unpack and install!
- > Competitively priced for position in market
- > Supplied as pairs (unless 'S' suffixed)

Borg & Beck BECKTEC Shimmed Brake Pads*

- > Offering a comprehensive range of over 1,300 products
- > OE Specification - Compound made from fine metallic fibres consistent with OE formulation
- > Copper Free - Environmentally friendly, less corrosive on Disc compared to more coarse formulations as seen on alternative pads
- > BECKTEC Shimmed providing double rubber shim for improved noise reduction and anti-rattle qualities
- > Complete with wear indicators & fitting kits where standard
- > Competitively priced for position in the market
- > Regulation 90 Approved

*Borg & Beck BECKTEC coated Brake Discs and BECKTEC shimmed Brake Pads are being phased in to replace the existing range throughout 2015.
